07:42:26 C3-C7 Posterior Cervical Discectomy and Fusion

07:42:27 Discussion w. Patient - Informed patient of neurological monitoring throughout surgical procedure, interviewed regarding symptoms, and obtained consent for IONM.

Discussion w. Surgeon - Dr. [REDACTED] requests SSEPs, TOF, EEG, TcMEP and EMG for this procedure. TcMEPs will be conducted per surgeon request.

Discussion w. Anesthesia – Anesthesia team is aware that SpecialtyCare, Inc. protocol lists the ideal conditions, for TcMEP monitoring, in most patients, is total intravenous anesthesia (TIVA) with only short-acting muscle relaxant at induction and 4/4 twitches maintained after exposure. If necessary TCMEPs may be recorded with up to 0.5 MAC inhalational agents, but should be avoided in patients with prior deficits or myelopathy. Bilateral soft bite blocks requested to prevent injury and protect the endotracheal tube.

07:42:27 Patient [REDACTED] C3-C7 Posterior Cervical Decompression and Fusion, surgeon requests SSEPs, EMG, TOF, EEG, TCMEP and pre-positioning baselines. Patient had an ACDF 01/09/2024, this is the 2nd stage posterior.

07:42:30 Patient in room 0737

07:49:07 Induction: Fentanyl 100mcg, Succ 120mg, Propofol 150mg, Lidocaine 50mg

Connected with Leslie McDougall via Bomgar remote support.

07:59:02 Visually confirmed soft bite block placed by anesthesia.
